

Planeat summary

Planeat is a food delivery Android application that aims to connect home cooks and restaurants with customers who are looking for freshly cooked meals. The application is developed using the Flutter framework, which ensures a smooth and user-friendly experience for customers.

One of the key features of Planeat is its scheduled delivery feature, which allows customers to choose the time and date for their meal to be delivered. This ensures that they can receive their food when it's most convenient for them. Additionally, Planeat offers a day-by-day new meal feature, which provides customers with a diverse range of meal options to choose from.

Home cooks and restaurants can sign up for Planeat to offer their services to customers. They can create their menus, set their prices, and manage their orders through the application. Customers can easily browse through the available options, place orders, and track their deliveries through the app.

Overall, Planeat offers a convenient and reliable food delivery service that benefits both home cooks and restaurants as well as customers. Its use of Flutter ensures a seamless and intuitive user experience, and its scheduled delivery and new meal features add an extra level of convenience and variety for customers.
